About

Senior accounting professional who moved into automation and analytics - building workflows that are repeatable, traceable, and easy for a reviewer to follow, not just fast.

Featured work

Source-to-Record Reconciliation

Matching, variance, exceptions, control totals

Policy-Driven Calculation Governance

Rules, assumptions, movements, review

Control Evidence Lifecycle

Ownership, evidence, remediation, certification

AI-Assisted Knowledge Capture

Responsible AI use, verification, human sign-off

School Inventory Web App

Real React + Firebase app built and shipped for a school

Public demos

Python reconciliation demo with tests, plus a verified Alteryx workflow - both included in the repo.

Tools

Day to day: Alteryx, advanced Excel, Power Query, VBA, Power Automate, Copilot.

Analytics: Power BI, SQL, data visualization.

Building up: Python, React/Firebase, automated testing, responsible AI.

A note on the data

Cases 1-9 use synthetic data only. The inventory app is real, with credentials and school data left out of the repo.

Standardize first. Automate second. Control throughout. Improve continuously.
